

Education

Loughborough University Loughborough, UK

PRODUCTS USED: SaarFloor Noppe Stud Tile

SaarFloor Noppe Stud Tile flooring in a variety of colours was recently used to help create an inspirational educational environment in the refurbished Keith Green Building, home to the School of Architecture at Loughborough University.

Noppe stud flooring is a hard wearing rubber tile with a low-profile studded surface for heavy commercial use, available in 12 colours with a 3.0mm or 4.0mm gauge. Over 1000m² of this flooring in six different shades was installed by Lincoln-based construction and interior fit out specialists Acorn Partitions & Storage Systems Ltd (APSS).

Noppe stud tiles in the Limestone Green, Steel, Black Coal, Mercury, Cobalt and Cool Blue shades were fitted throughout classrooms and the computer suite which are used by undergraduate and postgraduate students on the university's architecture courses.

A spokesperson for APSS, commented, "We specified the Noppe stud tiles as we needed a high performance flooring product that would add a touch of subtle colour and pattern to the interior design scheme. We're delighted with the finished result and we believe this will be an ideal teaching and learning environment for Loughborough's students."
